BASED ON EVIDENCE

# WE HAVE BEEN CREATING SPECIALISED PRODUCTS FOR ANIMALS FOR 12 YEARS.

Our experience and knowledge have earned us the trust of thousands of veterinarians, breeders and animal caretakers in over 40 countries.

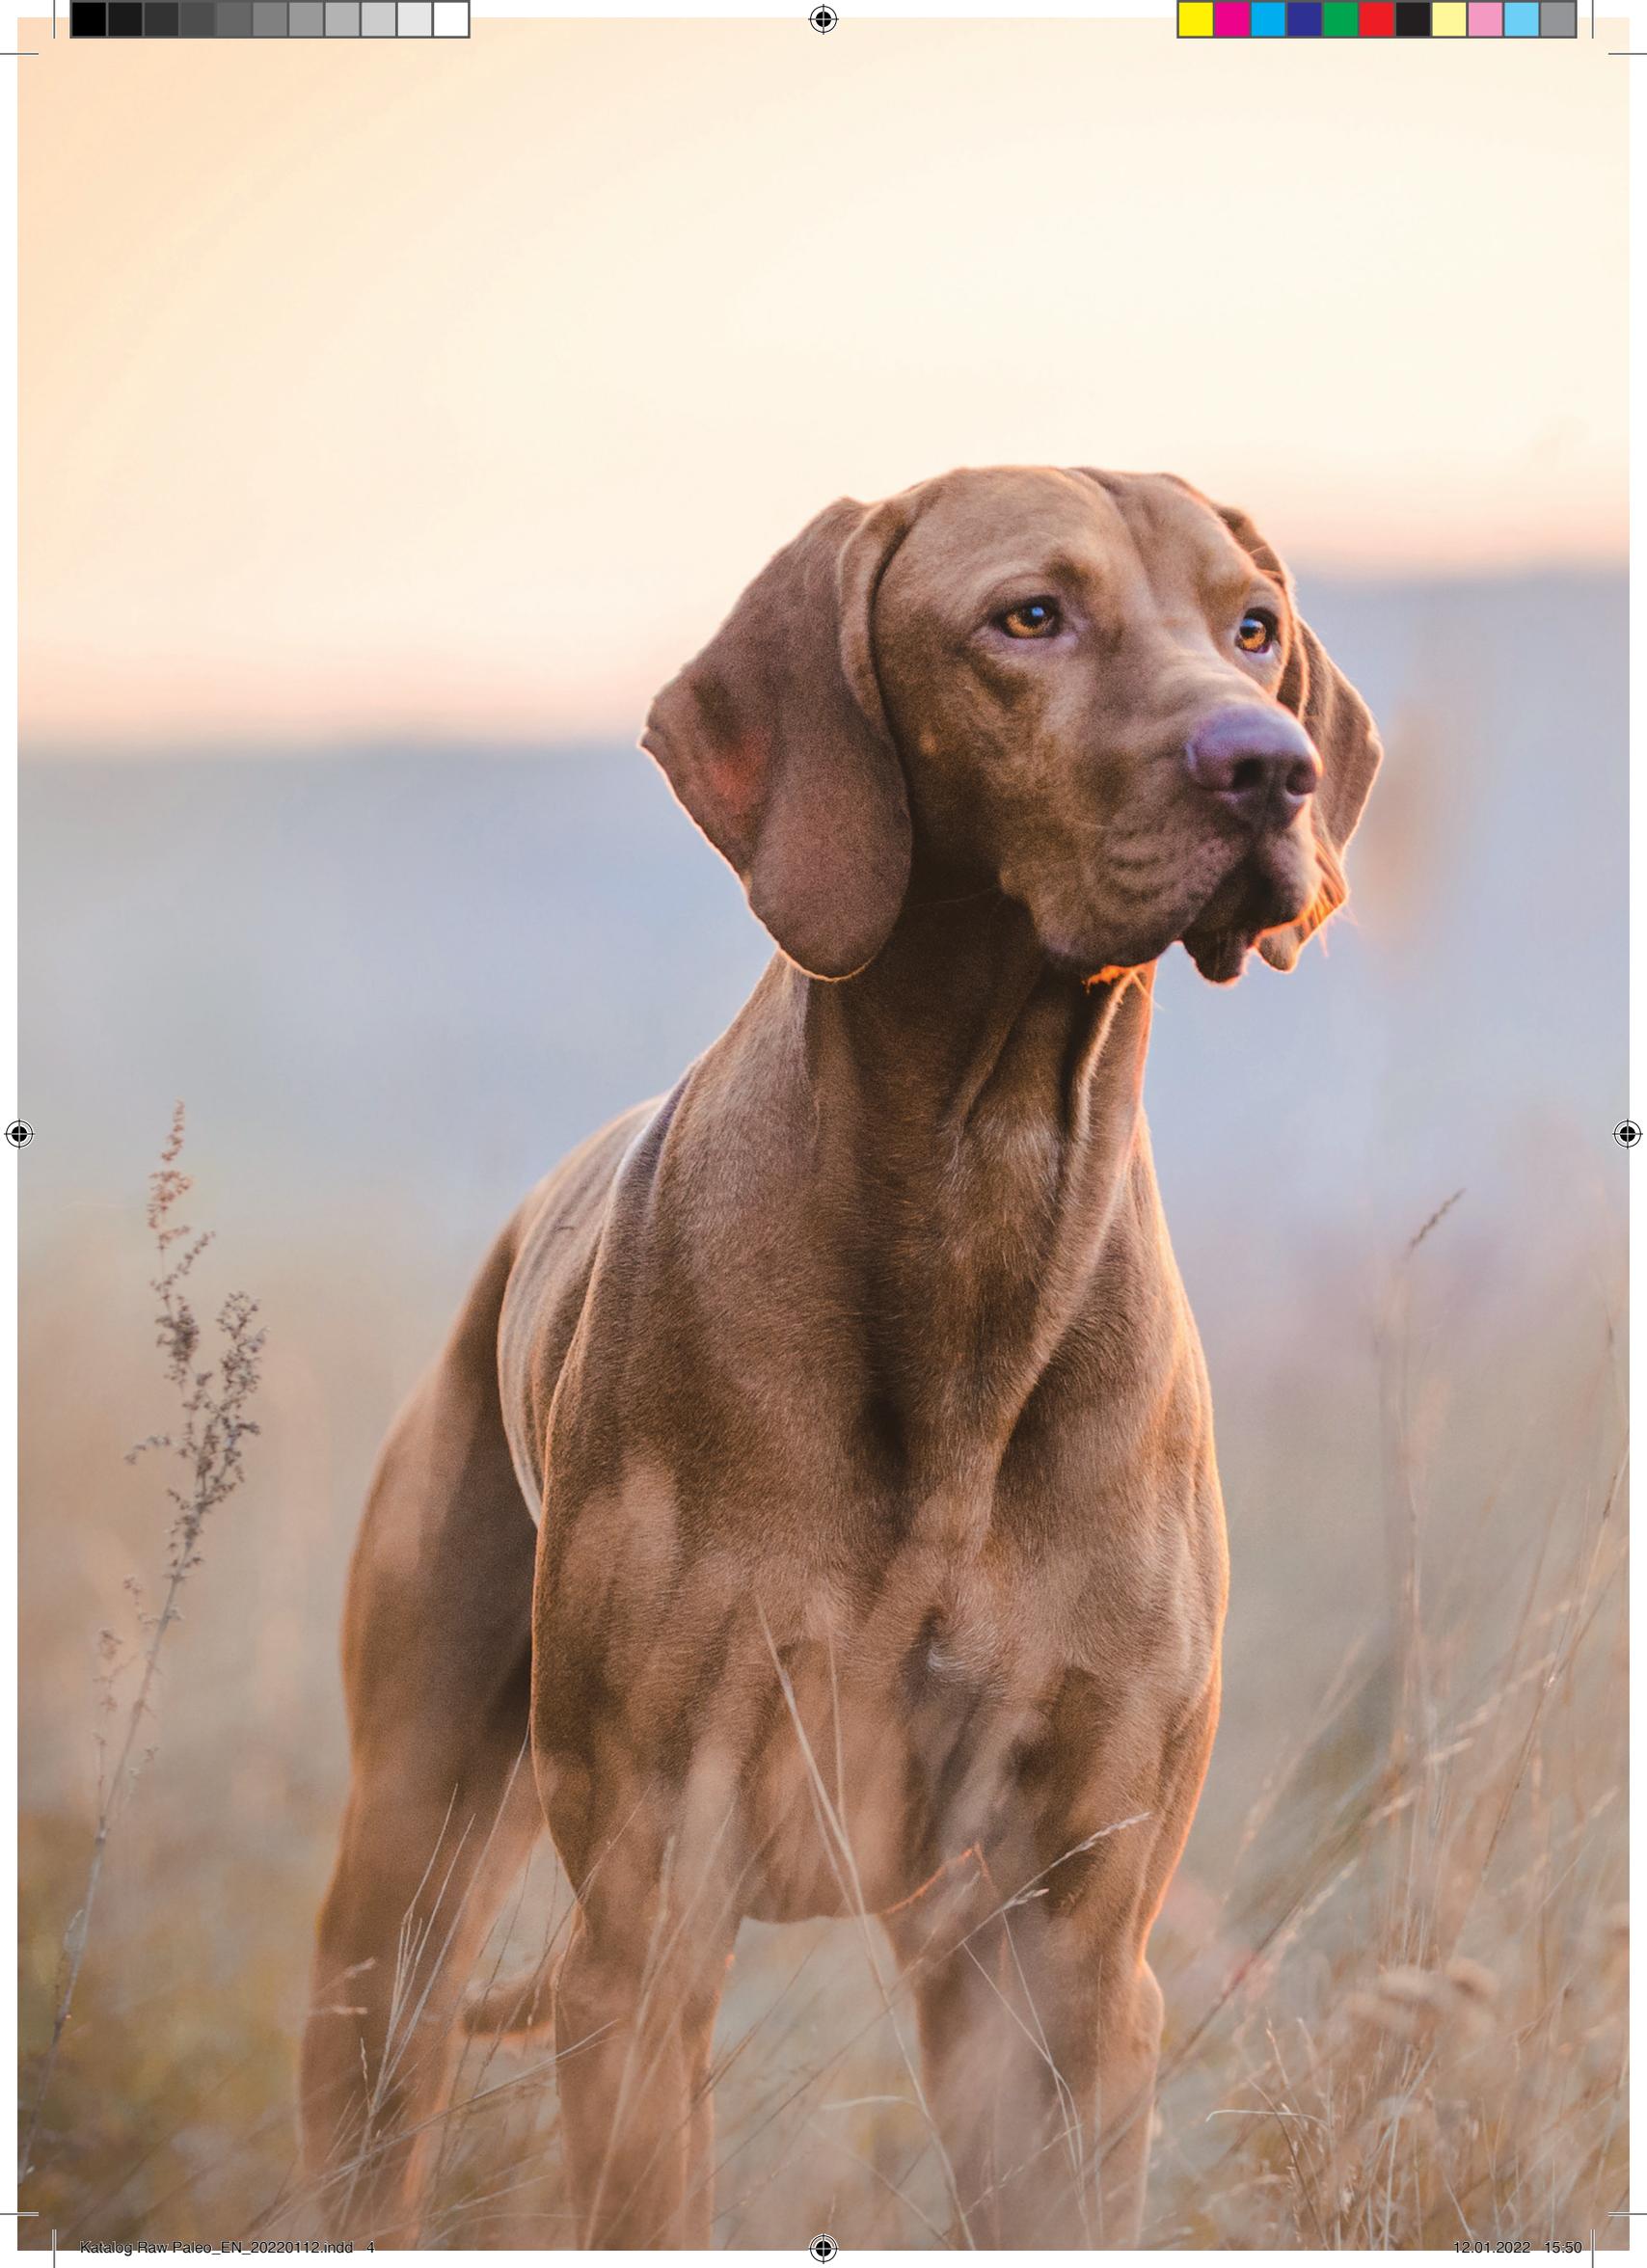

\* Based on a survey among veterinarians in Poland, conducted by Kantar Polska S.A., in March 2021 on veterinary supplements (complementary compound feeds) for dogs or cats.

# Table of content

---

	RAW PALEO® FOR DOGS – dry food	
	Small and miniature breeds (1-8 kg) – puppies and adult dogs	
	Mini Puppy (turkey)	12-13
	Mini Puppy (beef)	14-15
	Mini Adult (turkey)	16-17
	Mini Adult (beef)	18-19
	Medium breeds (8-25 kg) – puppies and adult dogs	
	Medium Puppy (turkey)	20-21
	Medium Puppy (beef)	22-23
	Medium Adult (turkey)	24-25
	Medium Adult (beef)	26-27
	Large and giant breeds (od 25 kg) – puppies and adult dogs	
	Large Puppy (turkey)	28-29
	Large Puppy (beef)	30-31
	Large Adult (turkey)	32-33
	Large Adult (beef)	34-35
	RAW PALEO® FOR DOGS - wet canned food	
	<b>monoprotein</b> 400 g / 800 g can	
	Puppy (beef, lamb, turkey)	40-41
	Adult (beef, lamb, turkey)	42-43
	Light (beef, lamb, turkey)	44-45
	RAW PALEO® FOR DOGS – wet canned food	
	<b>duoprotein</b> 400 g can	
	Puppy (beef and rabbit, lamb and veal, turkey and duck)	48-49
	Adult (beef and rabbit, lamb and veal, turkey and duck)	50-51
	Research on RAW PALEO® Turkey	52-53
	Research on RAW PALEO® Beef	54-55
	RAW PALEO® FOR CATS – wet food in sachets	
	Kitten (beef, game, turkey)	64-65
	Adult (beef, game, turkey)	66-67
	Sterilised (beef, game, turkey)	68-69

# RAW PALEO® DRY FOOD FOR DOGS

# FRESHLY PREPARED TURKEY

AN EXCELLENT,  
EASILY DIGESTIBLE  
SOURCE OF PROTEIN

AS MUCH AS 80 G OF TURKEY PER 100 G OF FOOD

MONOPROTEIN, A SINGLE SOURCE  
OF ANIMAL PROTEIN

HIGH PALATABILITY

FRESHLY PREPARED INGREDIENTS  
(TURKEY AND CARROTS)

GRAIN-FREE RECIPE

Clear composition, high of freshly prepared turkey, grain-free recipe.  
Appropriately selected functional additives.

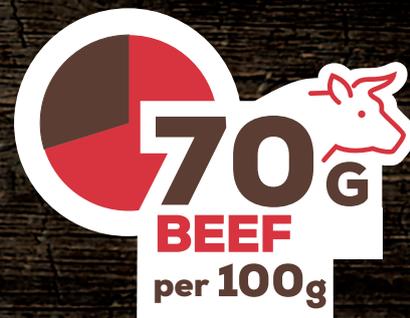

These are RAW PALEO foods, which reflect the nutritional needs of dogs  
at every stage of their lives.

Combining experience with knowledge of dog nutrition has made it  
possible to create an original food that is the natural choice for your dog.

**NATURAL VITALITY AND HEALTH.**

# FRESHLY PREPARED BEEF

AN EXCELLENT SOURCE OF PROTEIN

AS MUCH AS 70 G OF BEEF PER 100 G OF FOOD

MONOPROTEIN, A SINGLE SOURCE OF ANIMAL PROTEIN

HIGH PALATABILITY

FRESHLY PREPARED INGREDIENTS (BEEF AND CARROTS)

GRAIN-FREE RECIPE

Choose RAW PALEO and feed your pet according to its true nutritional needs, so it can remain as it is by nature.

**RAW PALEO.  
FOLLOWING THE INSTINCT.**

A BOLD RETURN TO THE ROOTS  
AND TO NATURAL FOOD  
FOR EVERY DOG AT EVERY STAGE OF LIFE.

## OUTSTANDING TASTE

---

The addition of freshly prepared turkey with carrots and beef with carrots makes RAW PALEO more aromatic, tasty and eagerly eaten by dogs.

## EASILY DIGESTIBLE

---

The high content of freshly prepared meat (boneless turkey or beef) makes the food tasty.

**Turkey** is an excellent source of easily digestible protein and amino acids essential for carnivores. The combination of freshly prepared and dried turkey ensures a suitably high protein content, good digestibility of amino acids and improves the palatability of the product. The high digestibility of the feed improves the consistency of the stool and reduces its volume.

**Beef** is a very good source of protein and fat, including essential fatty acids and minerals, mainly iron, zinc and selenium.

It is also a rich source of B vitamins (B2, B6, B12) and vitamin D.

The combination of freshly prepared beef with dried beef gives the kibbles a unique aroma, which significantly enhances the palatability and encourages dogs to eat.

## REDUCED ALLERGY RISK

---

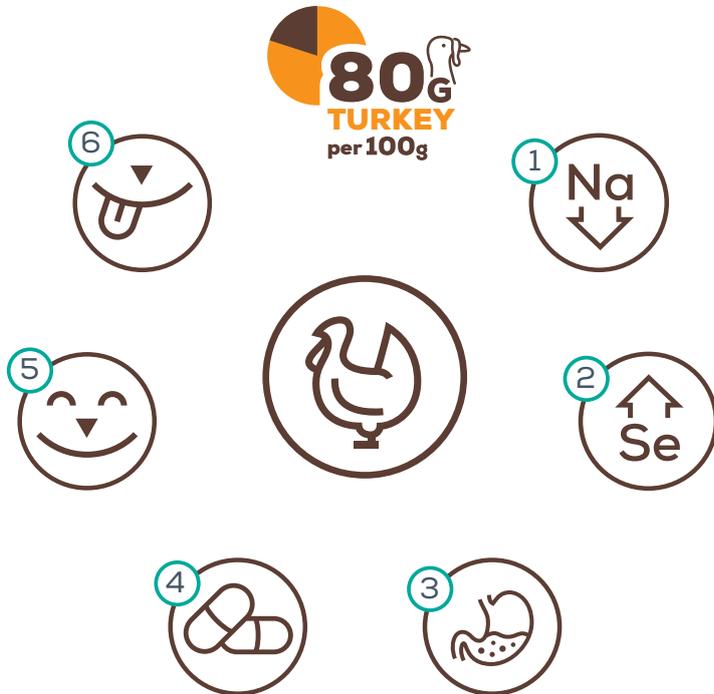

- With a single source of animal protein (monoprotein) we eliminate potential allergy risks.
- The Grain-Free Recipe of RAW PALEO food involves the exclusive use of potatoes and sweet potatoes as selected carbohydrate sources. This reduces the risk of food allergies to proteins of plant origin. The sweet potatoes and potatoes are a very good source of carbohydrates and fibre, minerals such as calcium, sodium, potassium and vitamins: C, E, B6 (pyridoxine) and folic acid.
- In RAW PALEO feed all raw materials are protected with natural antioxidants: rosemary and mixed tocopherols.

## EXCELLENT QUALITY INGREDIENTS

---

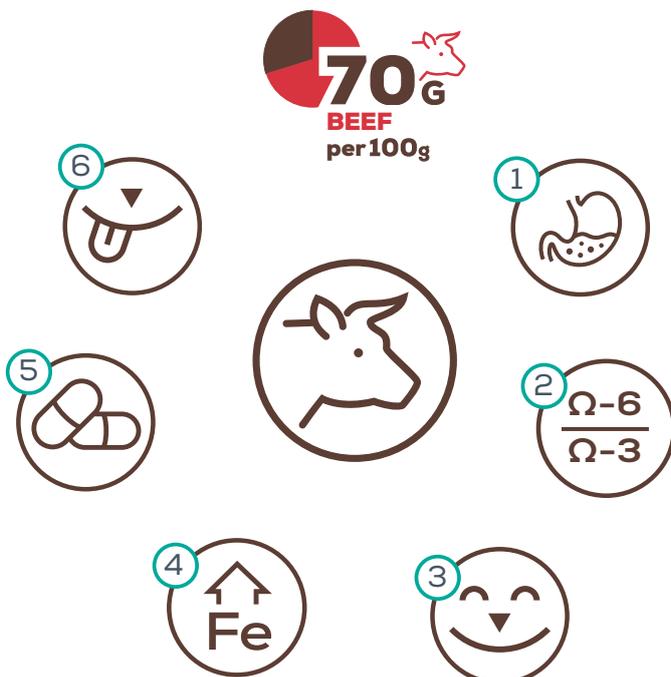

- Freshly prepared turkey.
- Freshly prepared beef.
- Freshly prepared ingredients with gentle heat treatment.
- Functional additives tailored to dogs' needs.
- The absence of cereal grains in the recipe reduces the risk of mycotoxins and gluten intolerance.

## WHY IS TURKEY SUCH A VALUABLE FOOD SOURCE?

- 1 Low sodium content** reduces the risk of disorders that can lead to dysfunction of vital organs such as the heart and kidneys.
- 2 Very high selenium content.** Selenium is part of the antioxidant system, which fights free radicals, supports the immune system and improves fertility. It is necessary for the proper functioning of the thyroid gland.
- 3 A very good source of protein.** Turkey is a meat with a high content of digestible protein and a relatively low fat content, which increases the feed nutritional value.
- 4 Good source of niacin (vitamin PP or B3) and vitamin B6.** Vitamin B6 is involved in the production of glucose and the proper functioning of red blood cells, and also in immune mechanisms. Niacin has enzymatic functions and is essential in the processes of protein, fat and carbohydrate combustion.
- 5 Important source of tryptophan.** Tryptophan is a precursor of serotonin, which affects animal behaviour. Increased serotonin facilitates puppy training.
- 6** Freshly prepared turkey with carrots contribute to the high palatability of the food.

## WHY IS BEEF SUCH A VALUABLE FOOD SOURCE?

- 1** Beef is rich in high value protein making it a very good source of essential amino acids for your dog and exceptionally rich source of L-carnitine.
- 2** Beef fat has a **favourable ratio of Omega-6 to Omega-3 acids**, of 2:1.
- 3 A very good source of Conjugated Linoleic Acid (CLA)**, which contributes to the reduction of body fat and increases insulin sensitivity.
- 4 Very good source of minerals** such as iron, zinc, copper, selenium.
- 5 A good source of vitamins**, especially B group and vitamins A, D and H (biotin).
- 6** Freshly prepared beef and carrots contribute to the high palatability of the food.

# WHY ARE FUNCTIONAL ADDITIVES IN PET FOOD SO IMPORTANT?

## FOS (FRUCTOOLIGOSACCHARIDES)

The addition of FOS in the feed formula ensures a correct balance of the microflora and stimulates local immunity in a non-specific manner.

## MOS (MANNANOLIGOSACHARIDES)

The addition of MOS in the feed formula ensures a correct balance of the microflora, protects against the growth of pathogens and stimulates non-specific local immunity.

## GLUCOSAMINE and CHONDROITIN

Support joint function. These are two of the best known protective ingredients for joint cartilage.

## PERNA CANALICULUS MUSSEL EXTRACT

New Zealand Green Lipped Mussel is a source of natural glucosamine and chondroitin, which support the proper functioning of joints. This additive is especially important for growing large breed dogs and active, working and sporting animals.

## ENTEROCOCCUS FAECIUM BACTERIA

*E. faecium* are the most dog-specific probiotic bacteria. Inhabiting the gastrointestinal tract with these bacteria supports healthy microflora, ensures proper digestion and absorption of nutrients, prevents the occurrence of flatulence and normalises the consistency of faeces.

A well-balanced dog food should contain the right amount of high-quality ingredients. This depends on the requirements of the dog, which vary according to age, physiological status and physical activity. Incorporating freshly prepared meat (turkey or beef) improves the nutritional value and taste of the food. Additional support for the animal organism are functional ingredients - e.g. salmon oil, borage, MOS, FOS and others, optimally selected for the needs of dogs of different sizes and ages.

#### **SALMON OIL & SEAWEED OIL**

They are among the richest sources of Omega-3 fatty acids and especially of their end metabolites, i.e. eicosapentaenoic (EPA) and docosahexaenoic (DHA) acids. These acids show a number of pro-health effects in terms of supporting the proper work of heart, kidneys, brain, joints and other organs and systems.

#### **BORAGE OIL**

Supports the proper functioning of the skin and coat. It is the richest source of gamma-linolenic acid (GLA). GLA along with other Omega-6 fatty acids maintain optimum hydration and elasticity of the skin. They are part of the basic structural elements of the skin, supporting it as an effective barrier against the entry of pathogens.

#### **DHA ACID**

DHA from salmon oil, seaweed oil or algae contributes to the normal development of the central nervous system and eyesight in puppies. It supports learning ability in growing animals and improves communication ability in older dogs.

# MINI PUPPY

PUPPY FOOD FOR SMALL AND MINIATURE BREEDS (1-8 KG)

## Indications

RAW PALEO® Mini Puppy is a complete and balanced food for small breed puppies (adult body mass less than 8 kg) from weaning to one year of age. The feed is grain-free and monoprotein, which means that the only source of animal protein is turkey. Thanks to the DHA content, the food helps to support vision and brain development, while *Enterococcus faecium*, fructooligosaccharides and mannanoligosaccharides help to stabilise the intestinal microflora and support digestion. Salmon oil supports skin and coat condition. The high palatability of the food is due to the very high content of freshly prepared ingredients: turkey and carrots.

## Nutritional information

This food meets the nutritional requirements of growing small breed dogs. Starting doses are shown in the dosage table. Depending on the age of the puppy, the daily ration should be divided into 4 or more portions. If nutrient requirements are higher, the size of the daily ration should be adjusted individually. The dog should have constant access to fresh, clean water.

## Packaging

750 g, 2.5 kg and 8 kg

A new food should be introduced gradually by mixing it with the old one over a period of approx. 2 weeks.

**80g**  
TURKEY  
per 100g

PROPERTIES	BENEFITS
<b>Monoprotein (turkey)</b>	A single source of animal-derived protein reduces the risk of allergy to proteins other than those specified.
<b>Grain-free recipe</b>	The carbohydrate sources are sweet potatoes and potatoes. The formula contains no maize, soya, wheat or oats, which reduces the risk of gluten intolerance and allergies to cereal and soya proteins.
<b>Salmon oil</b>	The best source of Omega-3 polyunsaturated fatty acids, especially eicosapentaenoic acid (EPA) and docosahexaenoic acid (DHA). These acids show a number of pro-health effects in terms of supporting the proper work of heart, kidneys, brain, joints and other organs and systems.
<b>High palatability</b>	The high palatability comes from the freshly prepared turkey with carrots.
<b>FOS (fructooligosaccharides)</b>	The addition of FOS improves faeces consistency, reduces the risk of flatulence and digestive disorders. Additionally, it stimulates the growth of beneficial intestinal bacterial flora, supports nutrition of enterocytes and stimulates intestinal immunity in a non-specific manner.
<b>MOS (mannanligosaccharides)</b>	The addition of MOS reduces the colonisation of the mucosa by pathogens, supports normal intestinal microflora and stimulates local and general immunity in a non-specific manner.
<b>DHA acid</b>	Influences the correct development of the central nervous system and vision in puppies. It supports learning and association abilities and improves communication skills. As an acid from the n-3 family it has many other pro-health functions exerted on the animal organism.
<b><i>Enterococcus Faecium</i> bacteria</b>	<i>Enterococcus faecium</i> belong to the most specific probiotic bacteria strain for dogs. Inhabiting the digestive tract with these bacteria supports healthy microflora, ensures proper digestion and absorption of nutrients, prevents the occurrence of flatulence and normalises the consistency of faeces.

# MINI PUPPY

PUPPY FOOD FOR SMALL AND MINIATURE BREEDS (1-8 KG)

## Indications

RAW PALEO® Mini Puppy is a complete and balanced feed for growing small breed dogs (up to 8 kg adult weight) from weaning to 12 months of age. The formula is grain-free and monoprotein, meaning that beef is the only source of animal protein. The addition of seaweed oil extract supports brain and visual development in your puppy. The inclusion of fructooligosaccharides and mannanoligosaccharides in the formula helps the digestive tract and supports stabilisation of the intestinal microflora.

## Nutritional information

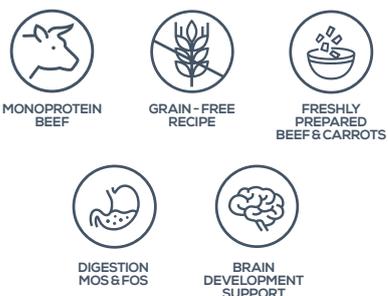

This food covers the nutritional requirements of growing small breed dogs. Starting doses are shown in the dosage table. Depending on the age of the puppy, the daily ration should be divided into 4 or more portions. If nutrient requirements are higher, the size of the daily ration should be individually adjusted. Fresh, clean water should be available to the dog at all times.

## Packaging

280 g, 2.5 kg and 8 kg

A new food should be introduced gradually by mixing it with the old one over a period of approx. 2 weeks.

# MEDIUM PUPPY

FOOD FOR MEDIUM-BREED PUPPIES (8-25 KG)

## Indications

RAW PALEO® Medium Puppy is a complete and balanced food for medium breed puppies (with an adult body weight between 8 kg and 25 kg), from weaning to one year of age. It is grain-free and monoprotein, i.e. turkey is the only source of animal protein. The addition of DHA helps support vision and brain development, while the addition of *Enterococcus faecium*, fructooligosaccharides and mannanoligosaccharides helps stabilise the gastro-intestinal microflora and aids digestion. Salmon oil supports skin and coat condition. The high palatability of the feed is due to freshly prepared ingredients: turkey and carrots.

## Nutritional information

This food covers the nutritional requirements of an adult small breed dog. Starting doses are shown in the dosage table. The daily ration should be divided into 2 or more meals. Where nutrient requirements are higher, the size of the daily ration should be adjusted individually. Fresh, clean water should be available to the dog at all times.

## Packaging

2.5 kg and 10 kg

A new food should be introduced gradually by mixing it with the previous food over a period of approx. 2 weeks.

SKIN & COAT

PROPERTIES	BENEFITS
<b>Monoprotein (turkey)</b>	A single source of animal-derived protein reduces the risk of food allergy to other proteins beyond those indicated.
<b>Grain-free recipe</b>	The carbohydrate sources are sweet potatoes and potatoes. The formula contains no maize, soya, wheat or oats, which reduces the risk of gluten intolerance and allergies to cereal and soya proteins.
<b>Salmon oil</b>	The best source of Omega-3 polyunsaturated fatty acids, especially eicosapentaenoic acid (EPA) and docosahexaenoic acid (DHA). These acids show a number of pro-health effects in terms of supporting the proper work of heart, kidneys, brain, joints and other organs and systems.
<b>High palatability</b>	The high palatability comes from the freshly prepared turkey with carrots.
<b>FOS (fructooligosaccharides)</b>	The addition of FOS to the feed formula improves faecal consistency, reduces the risk of flatulence and digestive disorders. Additionally, it stimulates the growth of beneficial intestinal bacterial flora, supports nutrition of enterocytes, stimulates intestinal immunity in a non-specific manner.
<b>MOS (mannanligosaccharides)</b>	The addition of MOS reduces the colonisation of the mucosa by pathogens, supports normal intestinal microflora and stimulates local and general immunity in a non-specific manner.
<b>DHA acid</b>	In puppies, it influences the correct development of the central nervous system and the organ of vision. It supports learning and association abilities and improves communication skills. As an acid from the n-3 family it has many other pro-health functions exerted on the animal organism.
<b><i>Enterococcus Faecium</i> bacteria</b>	<i>Enterococcus faecium</i> belong to the most specific probiotic bacteria strain for dogs. Inhabiting the digestive tract with these bacteria supports healthy microflora, ensures proper digestion and absorption of nutrients, prevents the occurrence of flatulence and normalises the consistency of faeces.

# MEDIUM PUPPY

PUPPY FOOD FOR MEDIUM-SIZED BREEDS (8-25 KG)

## Indications

RAW PALEO® Medium Puppy is a complete and balanced food for growing medium breed dogs (from 8 to 25 kg adult weight) from weaning to 12-15 months of age. The formula is grain-free and monoprotein, meaning that the only source of animal protein is beef. The addition of salmon oil and borage oil promotes skin condition and coat quality. The inclusion of fructooligosaccharides and mannan-oligosaccharides in the formula supports the digestive tract and helps stabilise the intestinal microflora.

## Nutritional information

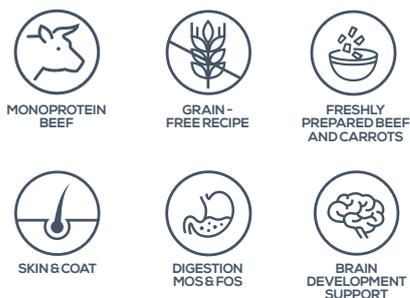

This food meets the nutrient requirements of growing medium breed dogs. Please refer to the dosage table for a starting dose. The daily ration, depending on the age of the puppy, should be divided into 4 or more meals. In the case of higher nutritional requirements, the size of the daily ration should be individually adjusted. Fresh, clean water should be available to the dog at all times.

## Packaging

280 g, 2.5 kg and 10 kg

A new food should be introduced gradually by mixing it with the previous food over a period of approx. 2 weeks.

# MEDIUM ADULT

FOOD FOR ADULT DOGS OF MEDIUM-SIZED BREEDS (8-25 KG)

## Indications

RAW PALEO® Medium Adult is a complete and balanced food for medium breed dogs (weighing between 8 kg and 25 kg), from the age of one. The food is grain-free and monoprotein, which means that the only source of animal protein is turkey. Salmon oil and borage oil help support the skin and coat, while the addition of *Enterococcus faecium*, fructooligosaccharides and mannan-oligosaccharides helps stabilise the gastrointestinal microflora and aids digestion. The high palatability of the feed is due to freshly prepared ingredients: turkey and carrots.

## Nutritional information

This food covers the nutritional requirements of an adult medium breed dog. The starting dosage is shown in the dosage table. The daily ration should be divided into 2 or more meals. Where nutrient requirements are higher, the size of the daily ration should be adjusted on an individual basis. Fresh clean water should be available to the dog at all times.

## Packaging

2.5 kg and 10 kg

A new food should be introduced gradually by mixing it with the previous food over a period of approx. 2 weeks.

# LARGE PUPPY

FOOD FOR LARGE AND GIANT - BREED PUPPIES (OVER 25 KG)

## Indications

RAW PALEO® Large Puppy is complete and balanced for large-breed puppies (adult body mass over 25 kg) intended to use from weaning to 18 months of age. It is grain-free and monoprotein, which means turkey is the only source of animal protein. The addition of New Zealand mussel, chondroitin sulphate and glucosamine has a positive effect on the development of the skeletal system and the function of joints in growing large-breed dogs. The addition of DHA helps support vision and brain development. Salmon oil supports skin and coat condition, as well as nervous system. The high palatability of the feed is due to freshly prepared ingredients: turkey and carrots.

## Nutritional information

The food covers the nutritional requirements of an adult small breed dog. The starting dosage is shown in the dosage table. The daily ration should be divided into 2 or more meals. Where nutrient requirements are higher, the size of the daily ration should be individually adjusted. Fresh clean water should be available to the dog at all times.

## Packaging

2.5 kg and 12 kg

A new food should be introduced gradually by mixing it with the previous food over a period of approx. 2 weeks.

# LARGE ADULT

FOOD FOR ADULT DOGS OF LARGE AND GIANT - BREED (OVER 25 KG)

### Indications

RAW PALEO® Large Adult is a complete and balanced food for large breed dogs (over 25 kg) from the age of 1.5 years. It is grain-free and the carbohydrate sources are sweet potatoes and potatoes. The monoprotein formula means that the only source of animal protein is turkey. Natural chondroprotective substances from *Perna canaliculus* mussels help to support joint health in large breed dogs, while the addition of salmon oil and borage oil promotes skin and coat condition. The high palatability of the food is due to the very high proportion of freshly prepared ingredients: turkey and carrots.

### Nutritional information

This food covers the nutritional requirements of an adult large breed dog. Starting doses are shown in the dosage table. The daily ration should be divided into 2 or more meals. Where nutrient requirements are higher, the size of the daily ration should be individually adjusted. Fresh clean water should be available to the dog at all times.

### Packaging

2.5 kg and 12 kg

A new food should be introduced gradually bymixing it with the previous food over a period of approx. 2 weeks.

MONOPROTEIN TURKEY

GRAIN-FREE RECIPE

FRESHLY PREPARED BEEF & CARROTS

DIGESTION MOS & FOS

SKIN & COAT

JOINTS SUPPORT

PROPERTIES	BENEFITS
<b>Monoprotein (turkey)</b>	A single source of animal-derived protein reduces the risk of food allergy to other proteins beyond those indicated.
<b>Grain-free recipe</b>	The carbohydrate sources are sweet potatoes and potatoes. The formula contains no maize, soya, wheat or oats, which reduces the risk of gluten intolerance and allergies to cereal and soya proteins.
<b>Salmon oil</b>	The best source of Omega-3 polyunsaturated fatty acids, especially eicosapentaenoic acid (EPA) and docosahexaenoic acid (DHA). These acids show a number of pro-health effects in terms of supporting the proper work of heart, kidneys, brain, joints and other organs and systems.
<b>Borage oil</b>	The richest source of gamma-linolenic acid (GLA) among oils. Supports proper functioning of skin and coat. It is a component of substances constituting a barrier protecting against evaporation of water from the body and against penetration of and against the penetration of allergens or harmful agents to the skin.
<b>High palatability</b>	High palatability due to freshly prepared turkey with carrots.
<b><i>Perna canaliculus</i> mussel extract</b>	New Zealand green lipped mussel extract is a source of glycosaminoglycans - natural building blocks of joint cartilage; supports correct functioning of joints.

# LARGE ADULT

FOOD FOR ADULT LARGE AND GIANT - BREED DOGS (OVER 25 KG)

## Indications

RAW PALEO® Large Adult is a complete and balanced food for large breed adult dogs (with body weight over 25 kg). The food is formulated without cereals and the carbohydrate sources are sweet potatoes and potatoes. The monoprotein recipe means that the only source of animal protein is beef. The addition of New Zealand mussel, salmon oil and borage oil have a positive effect on joint function and the condition of the skin and coat.

## Nutritional information

This food covers the nutritional requirements of an adult large breed dog. Starting dosages are shown in the dosage table. The daily ration should be divided into 2 or more meals. Where nutrient requirements are higher, the size of the daily ration should be adjusted on an individual basis. The dog should have continuous access to clean fresh water.

## Packaging

2.5 kg and 12 kg

A new food should be introduced gradually by mixing it with the previous food over a period of approx. 2 weeks.

### Indications

RAW PALEO® Puppy is a complete and balanced feed for growing dogs from weaning to maturity (around 1 year of age). It also meets the requirements of pregnant and lactating bitches. The formula is grain-free and monoprotein, which means that the only source of animal protein is beef. It contains no preservatives.

### Nutritional information

Starting doses are shown in the table on the pack. Puppies must have constant access to fresh, clean water. Pregnant and lactating bitches should have constant access to food and fresh water. Store in the refrigerator after opening. Feed at room temperature. New feeds should be introduced gradually, mixing with the previous feed over a period of approx. 2 weeks.

### COMPOSITION:

- Beef and beef offal 70%
- Beef broth 28,7%
- Minerals 1%
- Sunflower oil 0.2%
- Eggshell powder 0.1%

### Analytical constituents:

- Crude protein 10.7%
- Crude fat 6.9%
- Crude ash 2.0%
- Crude fibre 0.3%
- Moisture 75%

### ADDITIVES PER KG:

- Vitamin D3 200 IU
- Zinc (as zinc chelate with glycine hydrate) 25 mg
- Manganese (manganese sulphate II monohydrate) 1.4 mg
- Iodine (calcium iodate, anhydrous) 0.75 mg

### Package:

400 g, 800 g

### Indications

RAW PALEO® Puppy is a complete and balanced food for growing dogs from weaning to maturity (around 1 year of age). It also meets the requirements of pregnant and lactating bitches. The recipe is grain free and monoprotein, which means that the only source of animal protein is lamb. It contains no preservatives.

### Nutritional information

Please refer to the table on the pack for starting doses. Puppies must have constant access to fresh water. Pregnant and nursing bitches should have constant access to food and fresh, clean water. Once opened, store in the refrigerator. Feed at room temperature. New food should be introduced gradually by mixing with the previous food over a period of 2 weeks.

### COMPOSITION:

- Lamb and lamb offal 70%
- Lamb broth 28.7%
- Minerals 1%
- Linseed oil 0.2%
- Egg shell powder 0.1%

### Analytical constituents:

- Crude protein 10,6%

#### Indications

RAW PALEO® Puppy Beef and Rabbit is a complete and balanced feed for growing dogs from weaning to maturity (approx. 1 year of age). The product also meets the requirements of pregnant and lactating bitches. The feed is grain-free. The basic source of protein is beef enriched with 15% rabbit. This combination increases the palatability and fat in the feed.

#### Nutritional information

The food covers the nutritional requirements of growing dogs and pregnant and lactating bitches. Starting doses are shown in the dosage table. The daily ration may be divided into 2 or more meals. Where nutrient requirements are higher, the size of the daily ration should be individually adjusted. The food should be fed at room temperature. Once opened, the can should be stored in a refrigerator. Fresh, clean water should be available to dogs at all times.

#### COMPOSITION:

- Beef and offal 55%
- Broth 28.9%
- Rabbit and offal 15%
- Minerals 1%
- Egg shell powder 0.1%

#### Analytical constituents:

- Zinc (as zinc chelate with glycine hydrate) 25 mg
- Manganese (manganese sulphate II monohydrate) 1.4 mg
- Iodine (calcium iodate, anhydrous) 0.75 mg

#### Package:

400 g

#### Indications

RAW PALEO® Puppy Turkey and Duck is a complete and balanced feed for growing dogs from weaning to maturity (approx. 1 year of age). The product also meets the requirements of pregnant and lactating bitches. The feed is grain-free. The basic source of protein is beef enriched with 15% rabbit. This combination increases the palatability and fat in the feed.

#### Nutritional information

The food covers the nutritional requirements of growing dogs and pregnant and lactating bitches. Starting doses are shown in the dosage table. The daily ration may be divided into 2 or more meals. In the case of higher nutritional requirements, the size of the daily ration should be adjusted individually. The food should be fed at room temperature. Once opened, the can should be stored in a refrigerator. Fresh, clean water should be available to dogs at all times.

#### COMPOSITION:

- Turkey and offal 55%
- Broth 28.9%
- Duck and offal 15%
- Minerals 1%
- Egg shell powder 0,1%

#### Analytical constituents:

- Crude protein 1.2%
- Crude fat 7.50%
- Crude ash 2.8%
- Crude fibre 0.60%
- Moisture 80%

#### ADDITIVES PER KG:

- Vitamin D3 200 IU
- Zinc (as zinc chelate with glycine hydrate) 25 mg
- Manganese (manganese sulphate II monohydrate) 1.4 mg
- Iodine (calcium iodate, anhydrous) 0.75 mg

#### Package:

400 g

#### Indications

RAW PALEO® Puppy Lamb and Veal is a complete and balanced feed for growing dogs from weaning to full maturity (approx. 1 year old). The product also meets the requirements of pregnant and lactating bitches. The feed is grain-free. The primary source of protein is lamb enriched with a 15% addition of veal. This combination increases the palatability and fat of the feed.

#### Nutritional information

This food meets the nutritional requirements of growing dogs and pregnant or lactating bitches. Please refer to the dosage table for a starting dose. The daily ration can be divided into 2 or more meals. In the case of higher nutritional requirements, the size of the daily ration should be adjusted individually. The food should be fed at room temperature. Once opened, the can should be stored in a refrigerator. Fresh, clean water should be available to the dog at all times.

#### COMPOSITION:

- Lamb and offal 55%
- Broth 28.9%
- Veal and offal 15%
- Minerals 1%
- Eggshell powder 0.1%

#### Analytical constituents:

- Crude protein 10.7%
- Crude fat 7.60%
- Crude ash 2.3%
- Crude fibre 0.40%
- Moisture 75%

#### ADDITIVES PER KG:

- Vitamin D3 200 IU
- Zinc (as zinc chelate with glycine hydrate) 25 mg
- Manganese (manganese sulphate II monohydrate) 1.4 mg
- Iodine (calcium iodate, anhydrous) 0.75 mg
- Copper (as copper sulphate pentahydrate) 1 mg

WET FOOD FOR ADULT DOGS  
(BEEF AND RABBIT, TURKEY AND DUCK, LAMB AND VEAL)

**NEW**  
**TASTY DUETS OF FRESH MEAT**

**70%**  
**MEAT & OFFAL**

#### Indications

RAW PALEO® Beef and Rabbit Adult Dog is a complete and balanced food for adult dogs. The primary source of protein is beef enriched with 15% rabbit. RAW PALEO Beef and Rabbit is a grain free food.

#### Nutritional information

For the initial daily ration, which covers the nutritional requirements of adult dogs, please refer to the table on the pack. The daily ration can be divided into 2 or more meals. In case of special needs of your dog, e.g. increased physical activity, the daily ration may be increased. Once opened, the can should be stored in the fridge. The meal should be served at room temperature. Fresh water must be available to your dog at all times.

#### COMPOSITION:

- Beef and giblets 55%
- Broth 29%
- Rabbit and offal 15%
- Minerals 1%

#### Analytical constituents:

- Crude protein 10.7%
- Crude fat 7.60%

# STUDY ON THE FOOD AND THE CONDITION OF DOGS FED WITH RAW PALEO® TURKEY

As part of the study\* to evaluate RAW PALEO® food, the following parameters were evaluated:

- ① AN ANALYSIS OF THE COMPOSITION OF THE FOOD
- ② PALATABILITY AND CONSUMPTION OF THE FOOD
- ③ DIGESTIBILITY OF THE FOOD
- ④ QUALITY OF FAECES OF DOGS CONSUMING THE FEED
- ⑤ MORPHOLOGICAL BLOOD TEST IN DOGS CONSUMING THE FEED
- ⑥ SERUM BIOCHEMICAL PROFILE STUDY IN DOGS CONSUMING THE FEED

## ① ANALYSIS OF FEED COMPOSITION

Table 1. Nutrient content per 100 g of feed, as % dry matter and amount per 1000 kcal ME.

Nutrient	Unit	Content per 100 g of finished product	Percentage of dry matter	CONTENT per 1000 kcal ME	FEDIAF Min. ingredient requirement (unit/100 g d.m.)	FEDIAF Min. ingredient requirement (unit/1000 kcal ME)

\* All studies were conducted at the Faculty of Veterinary Medicine, Wrocław University of Life Sciences.

\*\* Explanation of abbreviations: NFE - non nitrogenous extractive compounds, ME - metabolic energy.

## ② PALATABILITY AND CONSUMPTION RATE

All dogs participating in the study ate the entire daily portion of food offered. Therefore, the consumption assessed in the whole study was estimated at 100%.

## ③ DIGESTIBILITY OF THE FOOD

The following digestibility values of the studied components were obtained in the conducted research:

**Tabela 3.** Digestibility of individual nutrients

Digestibility (%):	Average digestibility
Organic matter	84.6
Energy	94.9
Crude protein	77.4
Crude fat	89.7
Carbohydrates	90.2

## ④ FAECAL QUALITY IN DOGS CONSUMING THE FEED

**Table 4.** Faecal quality assessment in the test dog group. Waltham® scale faecal assessment system.

Lp.	Parameter tested	Value
1	Total number of defecations	89.00
2	% of correct defecations, of which % of perfect defecations, i.e. in the range of the score pts: 1.5-2.5	Correct: 100,00% which perfect: 23.60%
3	% of abnormal defecations, i.e. w score range < 1.5 or > 3.5 points.	0.00%
4	Mean score for faecal quality	2.76

## ⑤ ⑥ SELECTED BLOOD COUNTS AND BIOCHEMICAL PROFILE OF DOGS FED RAW PALEO® FOOD.

**Table 5.** Selected blood morphological and serum biochemical indices in dogs fed RAW PALEO for 180 days.

Indicator under analysis	norm	Day 0	Day 180
Aspartate aminotransferase (U/l)	<90	29.3	37.6
Alanine aminotransferase (U/l)	<100	47.6	50.5
Plasma total protein (g/l)	48-78	55.6	59.1
Plasma Albumin (g/l)	25-35	30.6	32.5
Blood glucose (mmol/l)	3.7-6.7	4.4	4.6
Red Blood Cells (T/l)	4.6-10,0	7.0	7.4
White blood cell (G/l)	6-16.5	8.35	8.45

After 6 months (180 days) of feeding RAW PALEO® no abnormal results were observed in the fed dogs.

### SUMMARY OF RESEARCH RESULTS

The results of the study clearly confirm that RAW PALEO®:

- The results of the study clearly confirm that
- It is highly palatable
- It is highly palatable
- Ensures that animals consume it in the recommended doses
- Ensures that animals defecate with the correct consistency and in the correct amount
- Maintains the health of dogs that have been eating the food for a long time

# FOOD PALATABILITY TESTS **RAW PALEO® BEEF** AND EVALUATION OF FAECES QUALITY AFTER FEEDING

**RAW PALEO® Beef** is a monoprotein balanced dry dog food based on a grain-free recipe. Freshly prepared beef is particularly important for the palatability of the food, with between 32 and 37.5 g per 100 g.

The food contains no other source of animal protein and the recipe contains neither cereal grains nor gluten. The composition of the food is simple and clear and the functional additives (salmon oil, seaweed oil, borage oil, MOS, FOS, glucosamine, chondroitin sulphate and New Zealand mussel) are selected to support the development or proper functioning of the dog's body depending on its age and size.

The research on **RAW PALEO® BEEF** food was conducted in cooperation with the University of Life Sciences in Wrocław on a group of adult dogs of different size, sex and breed (Table 1).

The caregivers administered the food twice a day in a daily dose adapted to the size of the dog and observed the dogs' behaviour during consumption. Additionally the food was administered to the dogs at a daily dose adjusted to the size of the dog and the dogs' behaviour during consumption was observed. During the study, faeces quality was also monitored and faeces size and consistency were assessed. The results obtained are summarised in Table 3.

Summary of the study: Analysis of the results collected during the study indicated that 90% of the dogs found the **RAW PALEO® BEEF** food palatable. Additionally, it was assessed that in 97% of dogs the faeces had a stable, normal consistency throughout the study. Dog guardians also acknowledged that the volume of faeces collected was significantly less than when feeding other foods.

**Table 1.** Breeds of dogs participating in the food study and their percentage in relation to breed, size and sex.

DOG BREEDS	PERCENTAGE SHARE OF THE SURVEY	SEX	
		MALE	FEMALE
Crossbreed	28,00%		
Beagle	38,00%	62%	38%
Whippet	9,50%		
Pit bull terrier	5,00%		
German Terrier	5,00%		
Doberman	5,00%		
Labrador Retriever	9,50%		
		DOGS BODY WEIGHT(KG)	
		< 20KG	>20KG
		71%	29%

**Table 2.** Palatability Scale - description of the dog's food consumption behaviour and the associated score

DESCRIPTION OF THE DOG'S BEHAVIOUR DURING FEEDING	ASSESSING THE PALATABILITY OF FOOD
the dog approaches the food bowl and eats immediately the whole meal (100%), willingly without any breaks, in less than 20 min.	<b>very good</b>
the dog approaches the food bowl, sniffs and eats all or almost all of the food (approx. 90% of the serving) with slight pauses of more than 20 min.	<b>good</b>
the dog approaches the food bowl, sniffs, tries, eats slightly more than half the meal (about 60-65% of the serving) or eats with breaks of more than 30 min.	<b>average</b>
the dog approaches the food bowl, sniffs, walks away, comes back, eats slowly, leaves most (more than 80%) of the food	<b>poor</b>
the dog approaches the food bowl, sniffs, eats a few croquettes, leaves the food	
the dog approaches the food bowl, sniffs, walks away, does not even try to eat the food	

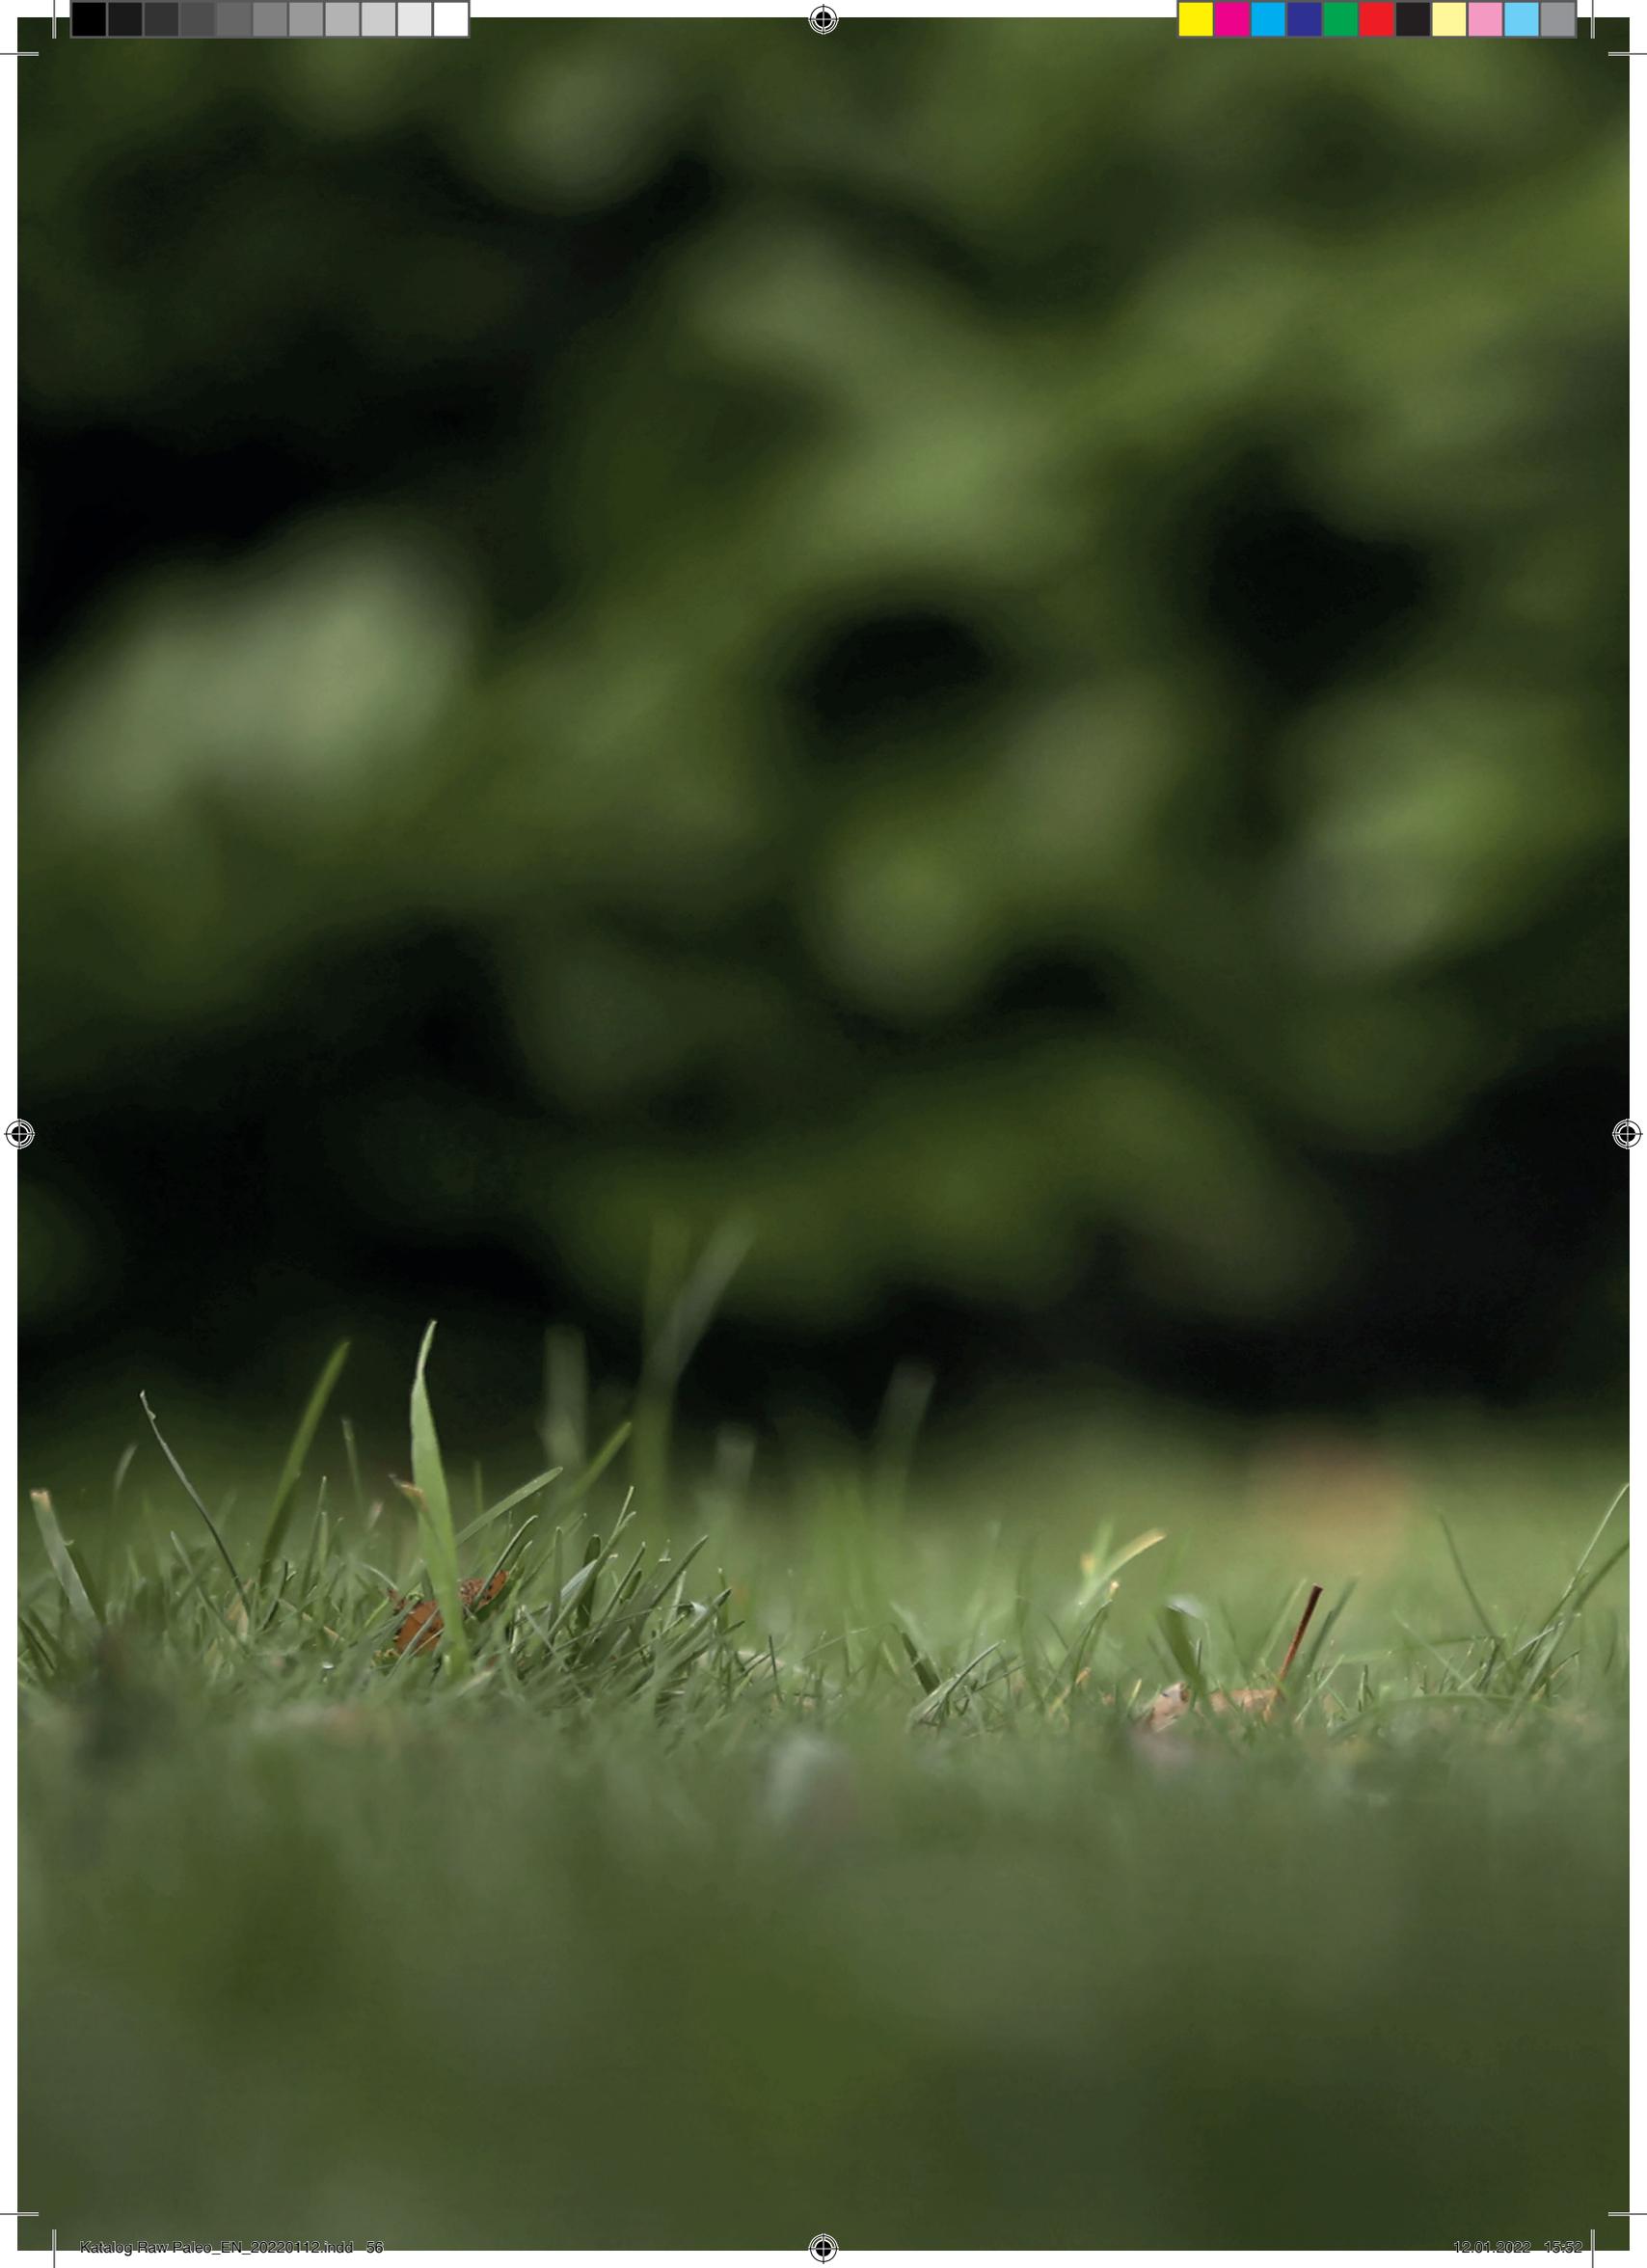

**Table 3.** Results of the RAW PALEO Beef palatability test and faeces quality assessment

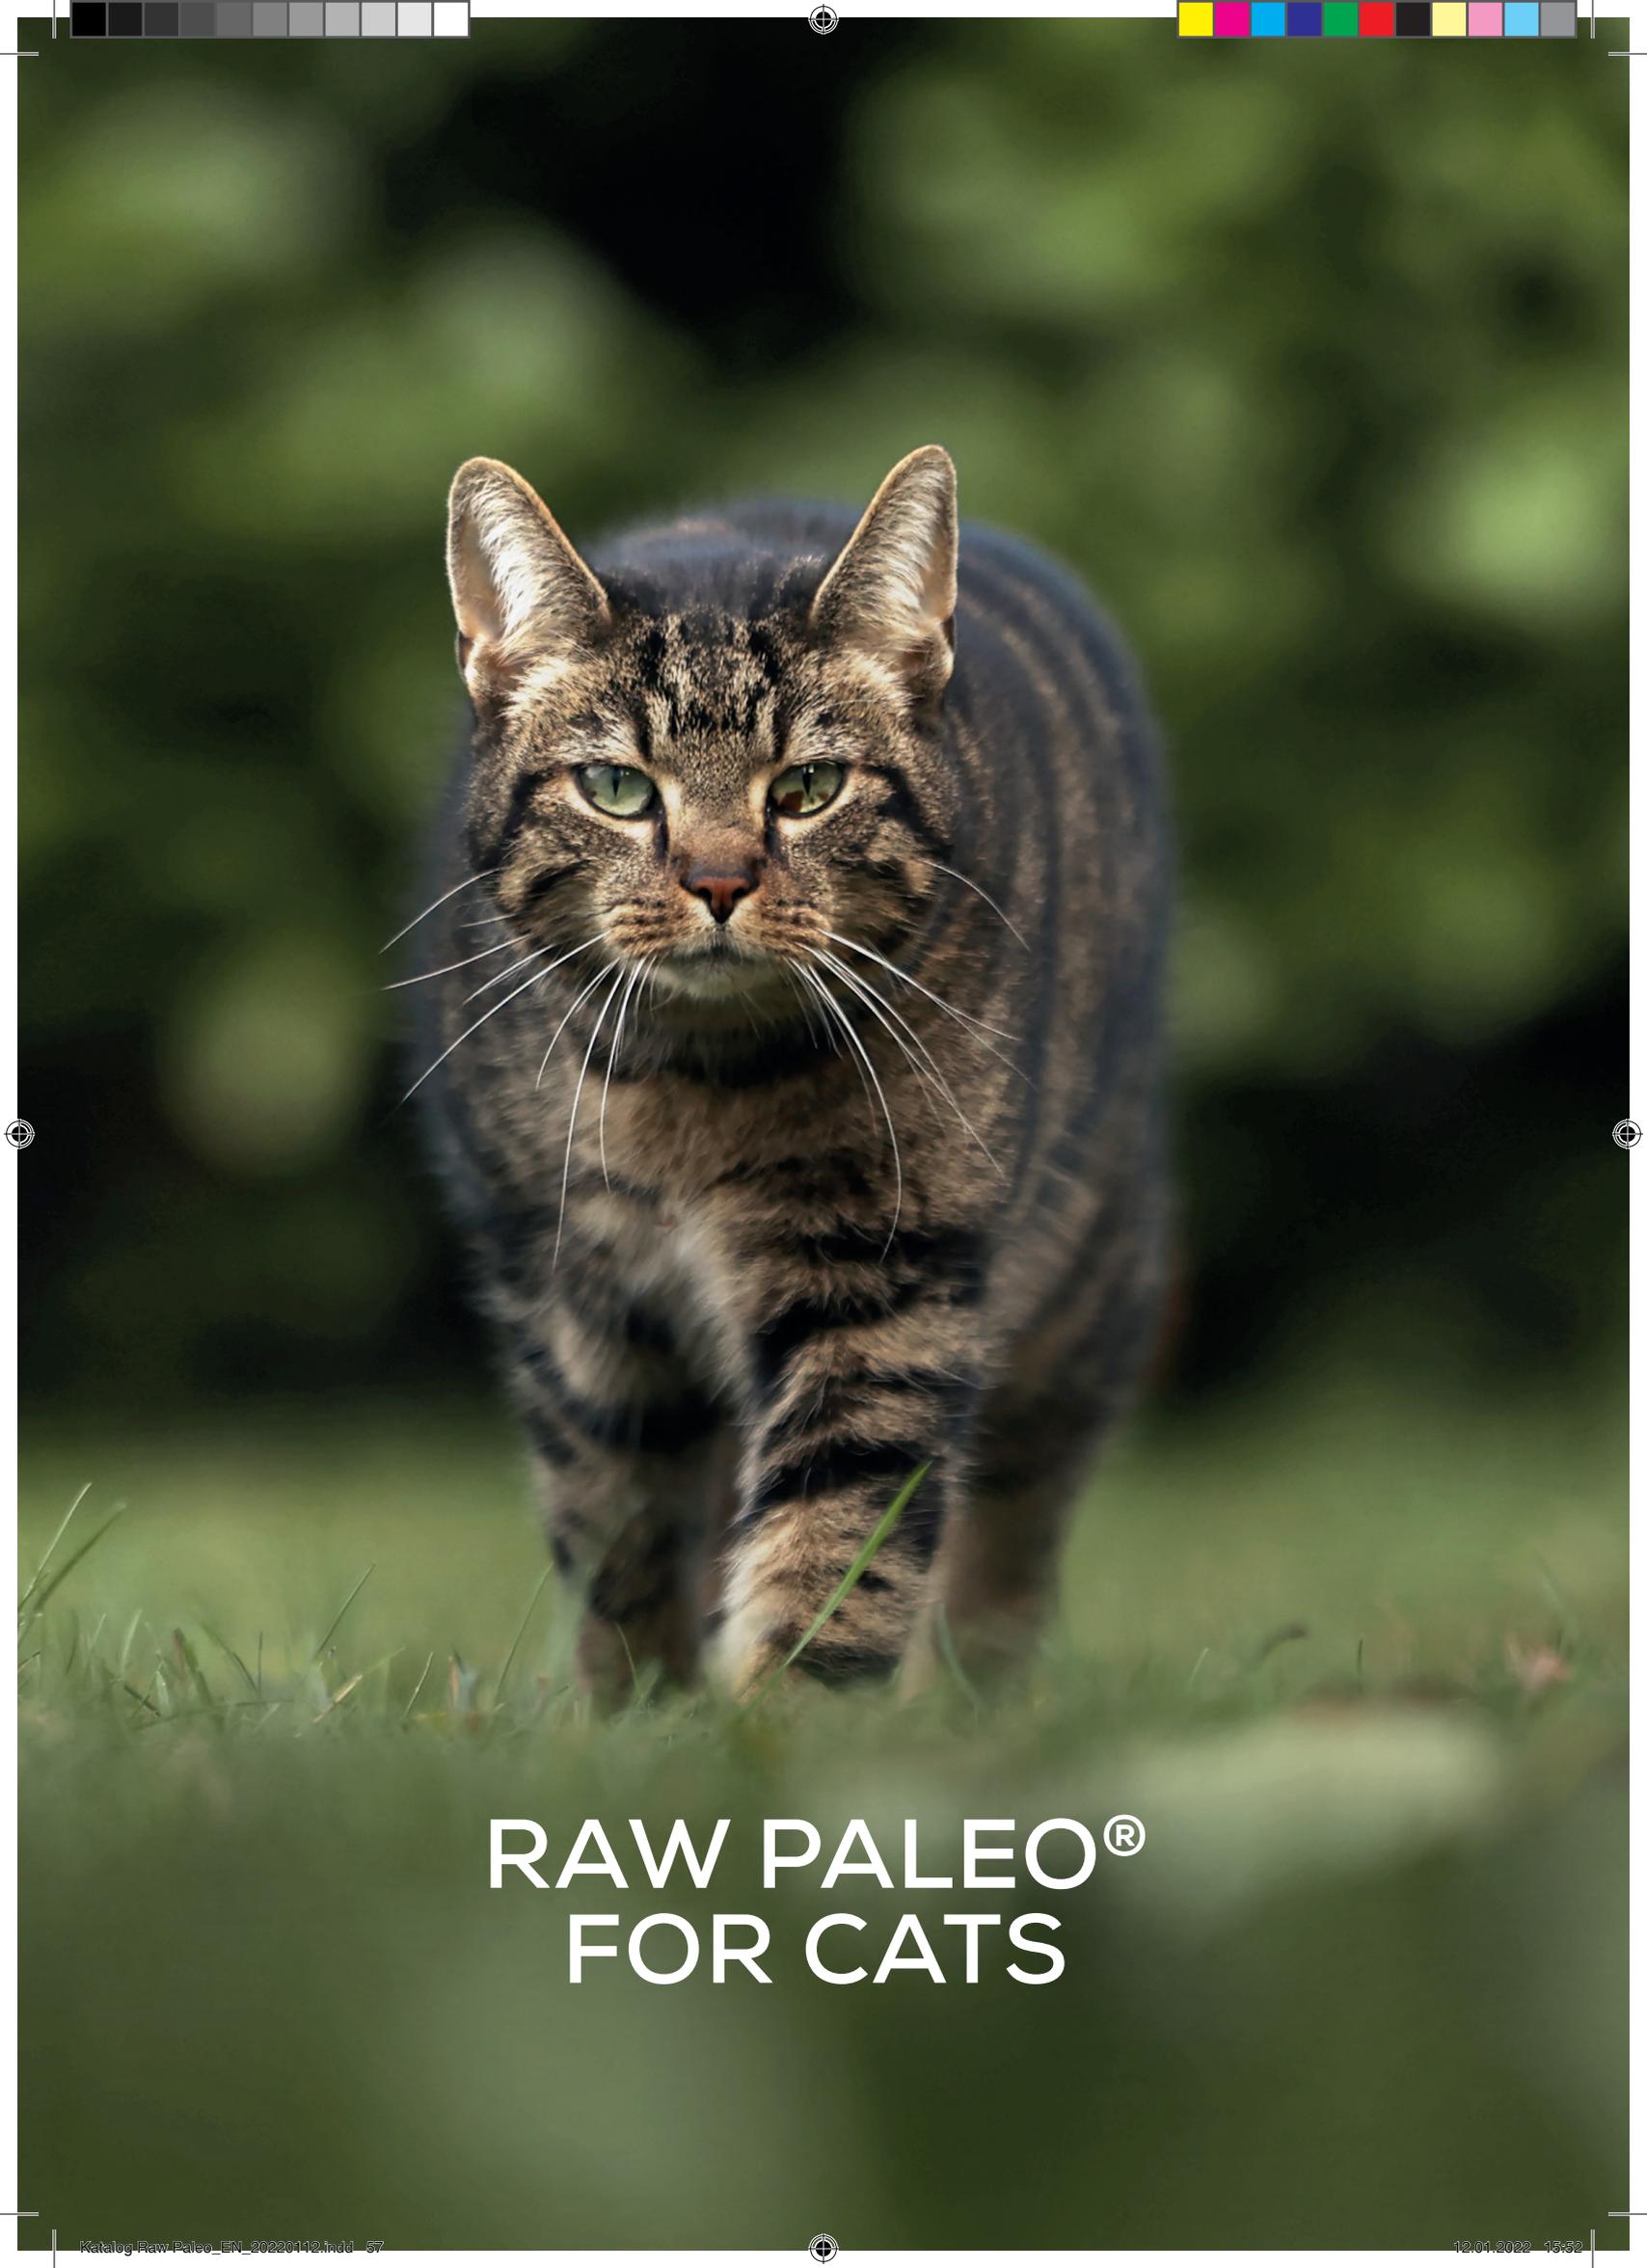

Lp.	MEASURED PARAMETER	EVALUATION
1	Palatability	90% of dogs found the food tasty
2	Faecies quality	97% properly formed faeces

\* description prepared on the basis of the Report from the research on the palatability and faeces quality of RAW PALEO Beef feed, realised in cooperation with Wrocław University of Life Sciences

### THE BENEFITS OF RAW PALEO® BEEF:

1. PALATABLE, complete and balanced food highly accepted by dogs allows optimal nutrition for the animal according to its needs
2. MONOPROTEIN, GRAIN-FREE formula avoids potential allergens (animal origin and from cereal proteins) and reduces the risk of gluten intolerance while covering nutrient requirements perfectly
3. FUNCTIONAL ADDITIVES – selected according to age (PUPPY/ADULT) and size of dog (MINI/MEDIUM/LARGE) for optimum development and support of body functions
4. FORMED FEACES throughout the feeding period indicates optimal digestibility of the food

# WHY ARE FUNCTIONAL ADDITIVES SO IMPORTANT?

Good pet food contains not only essential nutrients (proteins, fats, carbohydrates, minerals and vitamins) but also functional additives which have significant health effects. They support proper growth, development and functioning of cats of all ages.

## **BEEF**

Beef is a valuable source of protein. It is rich in phosphorus and easily absorbed iron. Beef contains high proportion of polyunsaturated fatty acids, mainly of Omega-6 group. A valuable component of beef is choline which is responsible for the proper functioning of the nervous system. It is a good source of niacin, vitamin B6 and vitamin B12, as well as zinc and selenium.

### CANNABIS OIL

A natural source of omega 3 and 6 fatty acids, it improves the coat's appearance and gives it a glow. It supports immunity and nourishes the skin, protects it from occurrence of inflammation.

### SUNFLOWER OIL

A source of omega 6 acids and vitamin E. It has a significant impact on the maintenance of natural immunity of the body and protects against cardiovascular system diseases.

### SALMON OIL

It is one of the richest sources of omega 3 fatty acids. It has a strong anti-inflammatory effect.

### L-CARNITINE

It accelerates fat burning, improves endurance and supports muscle regeneration after intensive play.

### PULVERISED EGGSHELLS

A natural source of calcium supports the regeneration of the joint cartilage and cares for healthy bone development.

### GAME

The meat of wild animals is a source of healthy food. Compared to the meat of other farm animals, game meat contains the least fat, most easily digestible protein and iron.

It has a unique taste, rich nutritional value and fewer calories. In addition, it is rich in valuable vitamins, especially B-group vitamins, as well as minerals, especially magnesium, phosphorus and calcium. What is important, game meat rarely causes allergies.

### TURKEY

Turkey meat is characterised by relatively high content of protein and low content of fat, what makes the food prepared with its presence easily digestible. It has low sodium and high selenium content and contains a significant amount of phosphorus, niacin and vitamin B6.

# WHY IS TAURINE ESSENTIAL IN CAT FOOD?

NOT WITHOUT REASON, MICE ARE  
A CAT'S TREAT: THEY ARE A GREAT SOURCE  
OF ESSENTIAL TAURINE.

## WHAT IS TAURINE?

Taurine is one of the most important amino acids essential for cats and is found in most animal tissues, such as heart, muscles, internal organs, or retina. Taurine has an antioxidant effect, protects from the detrimental action of free radicals. It is being used in the process of feeding cats, irrespective of their age, or medical condition. It particularly fulfills important part in relation to kittens – participating in the development of the central nervous system and the retina. Taurine deficiency leads to many serious consequences, so it should be supplemented **at every stage of a cat's life.**

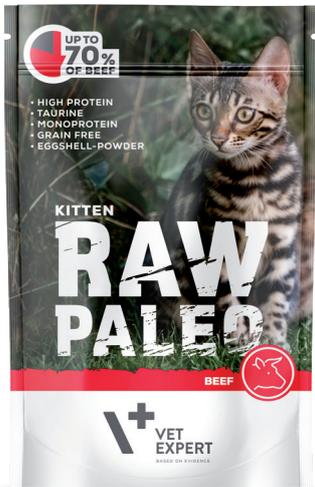

## A WARM MEAL IS A TASTY MEAL FOR YOUR CAT

Cat ancestors and modern small and big wild cats eat their prey right after hunting when it's still warm. A warm meal is very attractive for a cat as it stimulates not only its taste buds but also its sense of smell. This is especially important when feeding sick animals, whose appetite is usually reduced. Remember not to give food just after taking it out of the fridge. The sachet can be put into hot water for a while or warmed up in a baby bottle warmer.

# KITTEN

WET FOOD FOR GROWING CATS  
(BEEF, GAME, TURKEY)

UP TO  
**70%**  
MEAT  
& OFFAL

## Indications

RAW PALEO® Kitten is a complete and balanced food for growing cats from weaning to one year of age. The food is Grain Free Recipe and monoprotein, which means that beef is the only source of animal protein. Powdered eggshells are the source of calcium in the recipe. No preservatives.

## Nutritional information

The starting dosage is shown in the table on the packaging. The cat must have constant access to fresh, clean water. Store in the refrigerator after opening. Serve at room temperature.

## Package:

100 g

## COMPOSITION:

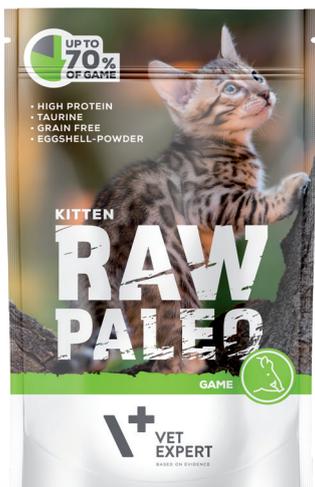

- Beef and beef offal 70%
- Beef broth 28.8%
- Minerals 1%
- Salmon oil 0.2%
- Egg shell powder 0.1%

## Analytical constituents:

- Crude protein: 10.7%
- Crude fat: 6.9%
- Crude ash: 0.3%
- Crude fibre: 2.1%
- Moisture: 78%

## ADDITIVES PER KG:

- Vitamin D3 (cholecalciferol) 200 IU
- Zinc (as zinc sulphate monohydrate) 25 mg
- Manganese (as manganese sulphate II, monohydrate) 1,4 mg,
- Iodine (as calcium iodate, anhydrous) 0,75 mg
- Taurine 1500 mg

## Indications

RAW PALEO® Kitten is a complete and balanced food for growing cats from weaning to one year of age. The formula is Grain Free Recipe and the source of animal protein is venison. Powdered eggshells are the source of calcium in the recipe. No preservatives.

## Nutritional information

The starting dosage is shown in the table on the packaging. The cat must have constant access to fresh, clean water. Store in the refrigerator after opening. Serve at room temperature.

## Package:

100 g

## COMPOSITION:

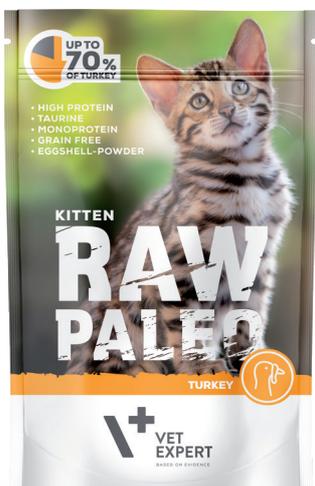

- Game meat and game meat offal 70%
- Game meat broth 28.8%
- Minerals 1%
- Hemp oil 0.2%
- Egg shell powder 0.1%

## Analytical constituents:

- Crude protein: 10.5%
- Crude fat: 6.3%
- Crude ash: 0.3%
- Crude fibre: 2.2%
- Moisture: 76%

## ADDITIVES PER KG:

- Vitamin D3 (cholecalciferol) 200 IU
- Zinc (as zinc sulphate monohydrate) 25 mg

## VET EXPERT HAS BEEN PROMOTING ANIMAL HEALTH AND WELLBEING SINCE 2008.

Our mission is to support caregivers and veterinarians in daily care and treatment decisions. So that every animal can look, feel and live its best.

Vet Expert products are used by veterinarians, breeders and animal carers in over 40 countries. In Poland Vet Expert is the leader of trust among veterinarians. The high quality and effectiveness of our products have been recognised and awarded many times. The product development concept "Vet Expert. Based on evidence" guarantees visible results supported by scientific evidence.

We are the only company with such a broad portfolio of specialised products:

-  nutritional supplements for companion animals
-  rapid diagnostic tests for dogs, cats and farm animals
-  innovative line of cosmetics
-  unique hygiene products
-  veterinary diets and pet foods
-  compound feeds for farm animals

 We meet the most stringent production requirements. We use only factories with the highest pharmaceutical quality certificate GMP (Good Manufacturing Practice), and the production is no different from the standards of human medicine. All stages are under constant control and supervision.

 Formulations are developed together with veterinarians and scientists.

We are very grateful for your trust.  
We are constantly working on further innovations.

# OUR HIGH QUALITY PRODUCTS HAVE BEEN REPEATEDLY AWARDED BY THE VETERINARY COMMUNITY AND BREEDERS.

Thanks to the effectiveness of our dietary supplements and the innovative Twist Off capsule the VetExpert brand has become a leader in the veterinary community's trust in Poland.

The high quality of our veterinary diets has quickly met with the appreciation of doctors.
